ORGANIC FARMING:

Science and practice for profitable livestock and cropping

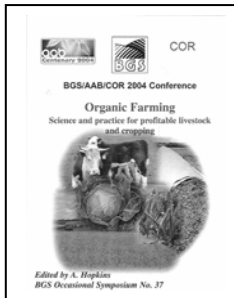

Edited by A Hopkins

No. 37 in the BGS Occasional Symposium Series

Proceedings of the BGS Conference held at Harper Adams University College

on 20-22 April 2004 (269 pp, ISBN 0 905 944 844, ISSN 0572-7022)

The aim of the conference was to focus on practical issues and applied research for registered and aspiring organic farmers. It proved to be a unique conference in many ways – not least because it was the first meeting that BGS had held specifically devoted to organic farming. It was also the first time the three organisations had collaborated so resulting in a better understanding and integration of ideas across the different sectors for land use and, indeed, the whole food chain. This unique collection of information is available from the BGS Office priced £30 including P&P (£25 to BGS, COR and AAB members).

LIST OF SESSION TITLES:

- Profitable organic systems – current and future issues
- Practical forage and livestock production
- Cropping systems

Including the **TEXTS of both theatre and poster presentations.** *(Some additional invited papers were presented which do not appear in this volume)*

ORGANIC FARMING - ORDER FORM

To: BGS Office, Dept of Agriculture, PO Box 237, University of Reading, Reading RG6 6AR
